

Ultimate Cockfights Metaverse

Disclaimer

The information in this white paper is subject to change and can be updated without notice. This whitepaper should not be construed as a commitment, as a promise or as a guarantee by Cockfights Metaverse or any other individual or organization mentioned in this white paper relating to the future availability of services related to the use of the tokens or to their future performance or value.

We've done our best to provide an accurate representation of Cockfights Metaverse. However, there may be forward-looking statements included in this document that do not materialize or do not materialize as stated due to changes in creative direction, factors beyond our control, or shifts in the marketplace.

Introduction

Cockfights Metaverse is a binance smart chain project that encourages cockfight enthusiasts to express their passion for the beak and spurs sport in a responsible and humane form: their own NFT inside a virtual space created for this sport.

In our metaverse you can mint your own fight roosters. These will have different types of rarity (castes) and will pick up levels as the fight and as they are fed and trained. Users will be able to have a regular view of the metaverse, but also travel using augmented reality (AR) gear.

Our goal is to create a metaverse that features multiple cockfights stadiums in countries across the digital globe and offer the same options and experience that the sport used to offer in real life without harming any animals in the process.

The Metaverse

The Cockfights Metaverse will have the following features:

- Marketplaces – In these marketplaces users will be able to trade their NFT's, buy, sell, breed (mint) and decide the split.
- Stadiums – Denizens and visitors of the Metaverse can go to stadiums on fight nights, place bets, view the fights and purchase post fight NFT's.
- Economy – There will be agriculture and gear fabricators (minters) and suppliers, as well as transportation from town to town and country to country (road, air and water).
- Farm stores – Here all supplies for the sport can be procured
- Trainers and caretakers – Trainers, groomers and caretakers for the roosters, hens and chicks
- Breeders – Users can purchase a plot to begin their breeding business, buy NFT's of roosters and hens and sell these in the marketplace.

Roosters, Chickens and Chicks

All animals require caretaking, either by a caretaker or the owner.

There will be a genesis minting of fight roosters. This minting will produce mature, ready to fight roosters. It will be a limited supply. After that breeding will be required

Fights Stadiums

Fight Stadiums is where the action of the metaverse occurs. Here cockfights will take place, bets will be placed, and the rank, level and reputation of roosters, teams and breeders will rise.

Tournaments

We will introduce tournaments as the metaverse grows. These tournaments will be national and world tournaments.

Fights and Bets

Users will have a variety of bets to place, and these can be placed regardless of entering the arena to view the fights.

Businesses inside the Metaverse

Businesses in the metaverse will begin using the same genesis process and will be fully stocked and ready to begin offering services. This will be a onetime opportunity for the buyers of these NFT, as all businesses will come with merchandise to monetize.

Some of these businesses include:

- Stadiums – Stadiums receive a of all the entry fees to the fights, fight entry fees, a portion of the bets in their fights, and a portion of the NFT sales of fight moments and mementos.

- Farm Stores
- Housing and training for Roosters
- Breeders
- Trainers and Caretakers
- Mechanical Horse Bets

The Cockfights Metaverse Architecture

Technical Foundations

The Cockfights metaverse provides the following features:

- A 3D engine to render 3D content
- A scripting system that developers can code in GDScript or C++
- A player-to-player (P2P) library giving developers access to P2P connections. For example, coordinates, postures, voice chat and messaging
- Easy tools (phone, VR, web, desktop) for customizing existing 3D spaces like shops.
- Your creations are yours. You own all the rights to the assets you make (and buy).

Conclusion

Over the next year, we will continue to build new creative avenues and offerings for players and creators to play, create, collaborate, collect and earn, and govern.

Our commitment will stay true, and as the metaverse grows, the community will benefit. We want all players and creators to feel they have a part in building the first truly beak and spurs metaverse that is Cockfights.
